

Spectralink Application Management (SAM) Enterprise Deployment Solution

SPECTRALINK ADVANCED FEATURES

	Barcode
	Biz Phone
	PTT
	Sys Updater
	SAFE
	Logging
	VQO
	WebAPI
	Device Settings

SAM PUSHES SPECTRALINK APPLICATION PARAMETERS TO VERSITY

EMM (ENTERPRISE MOBILE MANAGEMENT) UPDATES APPLICATION SOFTWARE ON VERSITY

SAM enables advanced application management for Spectralink Versity.

Customize Applications

- Configure Spectralink application parameters at the enterprise, group, and device levels

Easily Update Devices

- EMM updates applications on Versity
- SAM configures Spectralink application parameters for Versity

Reduce Complexity

- Simplify provisioning with batch configuration files

Empower Administrators

- Manage 1,000's of devices and groups within a single enterprise
- Configure advanced features such as PTT, SIP telephony, syslog, SAFE, OTA, ManDown, web applications and more

Together EMM and SAM Streamline Versity Deployment

One Touch Provisioning

Versity devices are factory-loaded with the SAM client and other Spectralink applications. After the Android Master bump, Versity receives network information from the EMM and then establishes a secure tunnel with the SAM server. Essential feature settings are provided by SAM and Versity is now fully functional.

The coordinated SAM system complements EMM functionality.

How it works

1. The EMM provides deployment management, application installation/updates and device security.
2. The Master is an Android device that uses NFC and an "EMM Relay Client" to transfer Wi-Fi information, EMM location and login credentials to Versity. This information is done via a "bump" between the Master and each device.
3. The EMM relays information to Versity about the SAM server.
4. Once Versity connects with SAM, the SAM server pushes Spectralink application parameters down to Versity via the SAM client app. Versity devices become fully functional at this stage.

Pricing & Licensing

SAM is licensed per device per year as a subscription. A fully functional trial version is available. For more information, please contact your Spectralink representative.

SAM configures Spectralink applications for Versity

Here are some of the Spectralink applications SAM manages.

- **Barcode:** Barcode symbology customizations
- **Telephony (Biz Phone):** SIP registration details
- **PTT:** Channels, Caller ID for device or group, access to channels
- **SAFE:** Enable/disable monitoring (ManDown) for movement, time outs, sensitivity, panic alarm, emergency dial number, alarm tones, etc.
- **Logging:** System logging enable/disable

To see all of the SAM manages, refer to the Spectralink applications datasheet.

SAM is installed on-premises

SAM server requirements are:

- VMWare ESXi server 5.0 (or later) host machine capable of running 64-bit guest OS Virtual Machines (VM)
- ESXi VM is a OS and will take over the HW
- Utility – Processor Check for 64-Bit Compatibility.
- 100GB free on ESXi server datastore
